

Technical Details

This report contains data collected from patients aged 16+ registered with a GP practice in England.

The charts produced in this PowerPoint can be resized and reformatted to meet your needs. The data is available behind the charts should you wish to change the chart type.

GPPS outputs show the weighted results (unless stated otherwise). Weighting ensures results are more representative of the population of patients aged 16 or over registered with a GP practice.

[See the GP Patient Survey website for further information about weighting.](#)

Results

Some of the data may be suppressed and will not be shown in the chart due to low base sizes or data may not be available due to loss of comparability following organisation or questionnaire changes.

A percentage that is below 0.5% but greater than 0% will be displayed as 0% as percentages are presented rounded.

Where percentages do not sum to 100%, or individual responses do not sum-up to the combined response, this may be due to respondents being able to select multiple responses or because the individual percentages or numbers for each response have been rounded.
